Oakley Meta glasses are a new product line that will combine Oakley’s signature design DNA with Meta’s industry-leading technology to give you deeper insights into your physical capabilities and help you share your biggest wins – on and off the field. The line will launch in a new global campaign starring Team Oakley athletes: World Cup winner Kylian Mbappé and three-time Super Bowl MVP Patrick Mahomes. Glasses have emerged as a major new hardware category of the AI era. We’re proud to lead the market with Ray-Ban Meta glasses, which have sold millions of units since launch. And now, we’re expanding our partnership with EssilorLuxottica to build upon another iconic, global brand. Introducing Oakley Meta HSTN Our first product for athletes and fans alike, Oakley Meta HSTN (pronounced HOW-stuhn), based on the HSTN style of Oakley glasses, combines bold aesthetics with cutting-edge tech. Capture the action completely hands-free with the built-in camera and share your unique POV. Get pumped up with your favorite playlist, listen to podcasts and more, thanks to powerful open-ear speakers seamlessly integrated into the frames. And with an IPX4 water resistance rating, you can push yourself to the outer limits of your potential. Oakley Meta HSTN is taking the game to the next level with features that represent the evolution of AI glasses: More battery stamina: A fully charged pair of Oakley Meta HSTN glasses can last up to eight hours of typical use and up to 19 hours on standby. You can charge them up to 50% in just 20 minutes. The glasses also come with a charging case that can deliver up to 48 hours of charging on the go. Higher resolution camera: Capture your activity and share your achievements in Ultra HD (3K) video. Meta AI meets Performance AI glasses: With Meta AI, your personal AI assistant, built in, athletes can get more out of their Oakley Meta HSTNs right out of the box. For example, you can level up the competition in a whole new way when playing a round of golf. Need to know how the wind is going to affect your drive? Ask, “Hey Meta, how strong is the wind today?” and channel your inner Team Oakley Athlete J.R. Smith. Or, like Boo Johnson, record epic moments and post to Stories, hands-free, by saying, “Hey Meta, take a video.” Get answers to a range of questions, whether you’re improving your game or checking the surf conditions. This slideshow requires JavaScript. Product Availability The Limited-Edition Oakley Meta HSTN will be available for preorder starting July 11 for \$499 USD, with the rest of the collection starting at \$399 USD dropping later this summer. Oakley Meta HSTN will be available in the US, Canada, UK, Ireland, France, Italy, Spain, Austria, Belgium, Australia, Germany, Sweden, Norway, Finland and Denmark. We’re also working to bring Oakley Meta HSTN to Mexico, India, and the United Arab Emirates later this year. Get a first glimpse of Oakley Meta HSTN in a global campaign featuring elite athletes from Team Oakley and beyond – from Gabriel Medina checking out the surf before carving lines to athlete J.R. Smith judging the wind on the golf course, Ishod Wair and Boo Johnson skating different spots and capturing it all and Bicho Carrera operating on another altitude. The next evolution of AI glasses will also debut at marquee sporting events, starting with Fanatics Fest June 20-22, followed by UFC International Fight Week, June 25-27, with more to come this year. Learn more about Oakley Meta HSTN and sign up to be among the first to know about availability here and Oakley.com. People around the world use Meta AI daily across WhatsApp, Instagram, Facebook and Messenger. And now, people can choose to experience a personal AI designed around voice conversations with Meta AI inside a standalone app. This release is the first version, and we’re excited to get this in people’s hands and gather their feedback. Meta AI is built to get to know you, so its answers are more helpful. It’s easy to talk to, so it’s more seamless and natural to interact with. It’s more social, so it can show you things from the people and places you care about. And you can use Meta AI’s voice features while multitasking and doing other things on your device, with a visible icon to let you know when the microphone is in use. Hey Meta, Let’s Chat While speaking with AI using your voice isn’t new, we’ve improved our underlying model with Llama 4 to bring you responses that feel more personal and relevant, and more conversational in tone. And the app integrates with other Meta AI features like image generation and editing, which can now all be done through a voice or text conversation with your AI assistant. We’ve also included a voice demo built with full-duplex speech technology, that you can toggle on and off to test. This technology will deliver a more natural voice experience trained on conversational dialogue, so the AI is generating voice directly instead of reading written responses. It doesn’t have access to the web or real-time information, but we wanted to provide a glimpse into the future by letting people experiment with this. You may encounter technical issues or inconsistencies so we’ll continue to gather feedback to help us improve the experience over time. This slideshow requires JavaScript. Voice conversations, including the full duplex demo, are available in the US, Canada, Australia, and New Zealand to start. To learn more about how you can manage your experience on the Meta AI app and toggle between modes, visit our help center. Intelligence for You Meta AI uses Llama 4 to help you solve problems, navigate your daily questions, and better understand the world around you. With the ability to search across the web, it can help you get recommendations, deep dive on a topic, and stay connected with your friends and family. Or if you’re just looking to play around with it, we provide conversation starters to inspire your searches. We’re using our decades of work personalizing people’s experiences on our platforms to make Meta AI more personal. You can tell Meta AI to remember certain things about you (like that you love to travel and learn new languages), and it can also pick up important details based on context. Your Meta AI assistant also delivers more relevant answers to your questions by drawing on information you’ve already chosen to share on Meta products, like your profile, and content you like or engage with. Personalized responses are available today in the US and Canada. And if you’ve added your Facebook and Instagram accounts to the same Accounts Center, Meta AI can draw from both to provide an even stronger personalized experience for you. This slideshow requires JavaScript. And just like all our platforms, we built Meta AI to connect you with the people and things you care about. The Meta AI app includes a Discover feed, a place to share and explore how others are using AI. You can see the best prompts people are sharing, or remix them to make them your own. And as always, you’re in control: nothing is shared to your feed unless you choose to post it. An Assistant for Everyone You’ll find Meta AI across all our products and all the devices it runs on. So whether catching up with family on Facebook, chatting with friends on WhatsApp or Messenger, scrolling Instagram, or wearing Ray-Ban Meta glasses, it’s easily accessible wherever you need it. Glasses have emerged as the most exciting new hardware category of the AI era, and Ray-Ban Meta glasses have led the way in defining what’s possible. To integrate all our most powerful AI experiences, we’re merging the new Meta AI app with the Meta View companion app for Ray-Ban Meta glasses, and in some countries you’ll be able to switch from interacting with Meta AI on your glasses to the app. You’ll be able to start a conversation on your glasses, then access it in your history tab from the app or web to pick up where you left off. And you can chat between the app and the web bidirectionally (you cannot start in the app or on the web and pick up where you left off on your glasses). Existing Meta View users can continue to manage their AI glasses from the Meta AI app - once the app updates, all your paired devices, settings and media will automatically transfer over to the new Devices tab. This slideshow requires JavaScript. From AI Glasses to Desktop Meta AI on the web is also getting an upgrade. It comes with voice interactions and the new Discover feed, just like you see in the app. This continuity across the Meta AI app, AI glasses and the web helps deliver a more personal AI that can be there wherever you need it. The web interface has been optimized for larger screens and desktop workflows and includes an improved image generation experience, with more presets and new options for modifying style, mood, lighting and colors. We’re also testing a rich document editor in select countries, one that you can use to generate documents full of text and images and then export those documents as PDFs. And we’re testing the ability to import documents for Meta AI to analyze and understand. You’re In Control of Your Experience Voice is the most intuitive way to interact with Meta AI, and the Meta AI app is designed to help you seamlessly start a conversation with the touch of a button – even if you’re multitasking or on-the-go. If you prefer to have voice on by default, there’s a control in your settings to toggle the Ready to talk feature on. Try the Meta AI app today on iOS or Android. We’re introducing passkeys on Facebook for mobile devices, offering another tool to safeguard your privacy and security. Passkeys are a new way to verify your identity and log in to your account that’s easier and more secure than traditional passwords. Passkeys will soon be available on iOS and Android mobile devices for Facebook, and we will begin rolling out passkeys to Messenger in the coming months. The same passkey you set up for Facebook will also work on Messenger once this capability launches. What Is a Passkey? Passkeys are secure digital credentials that act as alternatives for passwords. They allow you to log in to websites and apps securely by verifying it’s you using the fingerprint, face or PIN you use to unlock your device. Passkeys can give you peace of mind about your account’s security – they can’t be guessed or easily stolen. And once created, they make it faster and easier than ever to log in to Facebook, no memorized password needed. All you’ll need is a compatible mobile device and a Facebook account. The technology behind passkeys was developed by the FIDO Alliance, an open industry association focused on reducing the world’s reliance on passwords. Meta is an active member of the FIDO Alliance. Keeping Your Account Secure Passkeys are an upgrade in security compared to traditional passwords and one-time SMS codes because they are resistant to guessing or theft by malicious websites or scam links, making them effective against phishing and password spraying attacks. By using passkeys, you’ll have increased protection against online threats while also simplifying your login experience. Passkeys and the fingerprint, face scan or PIN you use to create them are always stored on your device and we’ll never see, share or store them. Do More with Your Passkey Passkeys aren’t limited to logging in to your Facebook account. You’ll also be able to use your passkey to securely autofill payment information when making purchases using Meta Pay, and eventually to log in to Messenger and protect your encrypted message backups. Setting Up Your Passkey Creating your passkey is easy and only takes a few simple steps. You can set up and manage your passkey in Accounts Center, found within the Settings menu on Facebook. You also may be prompted to set up a passkey when you log in to Facebook. Once it’s set up, you’ll be able to use your passkey moving forward to log in to Facebook on your mobile device. You’ll still be able to use other authentication methods, such as your password, to access your account. That way you can still access your Facebook account when you’re using a device that doesn’t support passkeys yet. Learn more about creating or removing your passkey in our Help Center. This week we introduced the new Facebook.com. Announced at F8 last year, it will now be the web experience for Facebook globally. It’s faster, easier to use and gives you eyes a break with Dark Mode. We’ve grown since Facebook.com launched 16 years ago. We’ve built new features, optimized for new devices and operating systems, and expanded to hundreds of languages. Recently we’d focused on the mobile Facebook experience, and realized our desktop site had fallen behind. People need it to keep up. So we did on-the-ground research, spending months talking to people about how we could make the web experience better for them. Now we’re excited to deliver the new site, a great new foundation for the next decades of Facebook.com. Find Things Faster Find what you’re looking for faster with new streamlined navigation: it’s never been easier to find videos, games and Groups, and the home page and page transitions load faster. It’s similar to our mobile experience. Reduce Glare with Dark Mode Enjoy lower brightness, alongside contrast and vibrancy, with dark mode. It minimizes screen glare for use in low light, wherever you are. The new immersive layout along with Dark Mode makes viewing videos on Watch a great experience. Manage Pages, Groups and Events with Ease Easily create Events, Pages, Groups and ads on Facebook. Preview a new Group you’re starting in real time, and see what it looks like on mobile before you create it. The new Facebook.com is simpler and easier to use, with the features you know and love. We’ll keep improving the experience — go to the Settings Menu and click Give Feedback to share feedback. We’re introducing a new Facebook Friends tab that makes it easier to connect with your friends. Beginning to Bring Back “OG” Facebook Experiences Connecting with friends has been a part of Facebook since it launched. Over the years, Facebook evolved to meet changing needs and created best-in-class experiences across Groups, Video, Marketplace and more, but the magic of friends has fallen away. We’ll be adding several “OG” Facebook experiences throughout the year, beginning with the revamped Friends tab. A New Friends Tab We want to make it easier for people to find their friends’ content on Facebook. So starting today in the United States and Canada, the new Friends tab provides an experience made up entirely of content from your Facebook friends. Formerly a place to view friend requests and People You May Know, the Friends tab will now show your friends’ stories, reels, posts, birthdays and friend requests. The Friends tab is available initially through the navigation bar on your home Feed and can always be accessed in the Bookmarks section of the app. To pin the Friends tab from there: Click your profile picture in the Home feed. Click “Settings & Privacy,” “Settings” and then “Tab bar.” Choose to customize the bar, then click “Friends” and pin the tab. Social media should feel social. In that spirit, we’ll be adding more fun, simple experiences to help you connect and share on Facebook throughout the year. Harapan kami kumpulan materi ini akan menjadi panduan yang baik untuk memahami cara tepat untuk mengasah & menerapkan kemampuan digital. Untuk informasi lebih lanjut tentang kebijakan dan proses pelaporan Meta: contact_id@meta.com Direktorat Jenderal Perlindungan Konsumen Dan Tertib Niaga Kementerian Perdagangan Republik Indonesia WhatsApp: (+62) 853 1111 1010 To help personalize content, tailor and measure ads, and provide a safer experience, we use cookies. By clicking or navigating the site, you agree to allow our collection of information on and off Facebook through cookies. Learn more, including about available controls: Cookies Policy Today at Connect 2021, CEO Mark Zuckerberg introduced Meta, which brings together our apps and technologies under one new company brand. Meta’s focus will be to bring the metaverse to life and help people connect, find communities and grow businesses. The metaverse will feel like a hybrid of today’s online social experiences, sometimes expanded into three dimensions or projected into the physical world. It will let you share immersive experiences with other people even when you can’t be together — and do things together you couldn’t do in the physical world. It’s the next evolution in a long line of social technologies, and it’s ushering in a new chapter for our company. Mark shared more about this vision in a founder’s letter. Our annual Connect conference brings together augmented and virtual reality developers, content creators, marketers and others to celebrate the industry’s momentum and growth. This year’s virtual event explored what experiences in the metaverse could feel like over the next decade — from social connection, to entertainment, gaming, fitness, work, education and commerce. We also announced new tools to help people build for the metaverse, including Presence Platform, which will enable new mixed reality experiences on Quest 2, and a \$150-million investment in immersive learning to train the next generation of creators. You can watch the full Connect keynote and learn more about how the metaverse will unlock new opportunities at meta.com. You can also learn more about our work over the past several months to develop the Meta brand on our design blog. Read all our news in the posts below: Our corporate structure is not changing, however, how we report on our financials will. Starting with our results for the fourth quarter of 2021, we plan to report on two operating segments: Family of Apps and Reality Labs. We also intend to start trading under the new stock ticker we have reserved, MVR5, on December 1. Today’s announcement does not affect how we use or share data. See also: Building the Metaverse Responsibly, Expanding Horizon: New Funding to Support Creators, Introducing Our New Company Brand (2019) What is Meta? Meta builds technologies that help people connect, find communities, and grow businesses. When Facebook launched in 2004, it changed the way people connect. Apps like Messenger, Instagram and WhatsApp further empowered billions around the world. Now, Meta is moving beyond 2D screens toward immersive experiences like augmented and virtual reality to help build the next evolution in social technology.
