دليل acer predator helios 300 price

Only 2 downsides as I see it with this machine. 16gb ram is a touch stingy. And the fans on TURBO are comically loud. Like you couldn't be in the same room as anyone else whilst using it loud. In all honesty, unless you have headphones, YOU won't be able to be in the same room as it. Considering probably 85-90% of the Laptops performance is available with the fans at more more human friendly levels I can still recommend this. Everything else is good.****EDIT*****Despite official sources saying this laptop can take up to 32gb of ram I put 64gb inside and have had no issues.I bought this Acer to replace my outgoing Acer Aspire V3 model from 2014. My old computer had struggled for years with video editing and most types of gaming and I was in desperate need of an upgrade. After the adobe apps started loading up and telling me that my graphics drivers are not only out of date but would flat out not be supported in upcoming releases I knew the end had come for that machine. My main focus is actually productivity not gaming although there is massive overlap in requirements. The so called "creator" laptops have beautiful screens but slightly underpowered GPU's and are costed at a massive premium. I needed something to handle Davinci Resolve, After Effects, Premier Pro, Ableton and Blender. Something mildly upgradeable with a good, colour accurate screen and a decent graphics GPU to chew through renders as fast as possible.This model ticks many boxes for me.Considering what's inside it's not as thick or heavy as what I imagined it would be. I'm used to "desktop replacement" laptops so wasn't expecting a super thin chassis. This Helios 300 will hopefully be more durable too as the lid is metal as is some of the chassis. It does attract fingerprints easily though.The screen immediately impressed me with it's sharpness and colours. The port selection is good, 3 x usb's, 1 x thunderbolt 4, ethernet, headphone socket, mini digital display port and hdmi. The included 1 TB m.2 ssd is speedy and large enough to get all my productivity apps installed no problem.The power brick is a fair old slab of a thing ,again, to be expected as the system can draw probably 280 watts at full crack. Using Davinci 18 with 4k footage from a Pocket 4k camera is buttery smooth, a massive improvement. Scrubbing is effectively instant. I've done a few test exports - admittedly without tons of effects so they are not taxing the machine but it just rips through them. The screen is gorgeous and by all accounts is very colour accurate for a "gaming" pc. This makes me more confident when I'm producing video edits the colours are more likely to look right. The QHD resolution is also a noticeable upgrade from a full HD.Now you can't buy a gaming PC and just not do some gaming on it can you? My old favourites like Starcraft 2 look fantastic on this in QHD with ultra settings.There's some included overclocking software and the machine does have a turbo button for when you want to wring every last ounce of performance out of this laptop. This mode whacks the GPU up to its full advertised power draw of 150w but comes with a heavy drawback - FAN NOISE as pointed out above. I had read a lot about this in reviews and figured it couldn't be that bad but it's "loud". The flipside to all this is that in winter you have a viable source of heat in whatever room you're in. The airflow is so high I reckon it could rival a small fan powered heater.I haven't run it on battery other than walking between power outlets but it does show 3.5 hours runtime when the computer is basically just idling. I imagine 2.5 hours of time with general surfing and some word processing or Excel or YouTube is realistic. This will obviously tail off the more demands you place on the system. Gaming with no power connected will result in a low power mode for the GPU / CPU and subsequent drop in performance so it really needs to be plugged in to game.The keyboard has a really nice feel to it. Again in reviews I had heard the keyboard was a bit meh but I like it. Maybe compared to the absolute best out there it's lacking but I've found it to be an upgrade in terms of feel from my old laptop and it has a nice muted clicky sound. The per key RGB lights put on a show but I haven't really found a use for it as even if I was gaming I'm not sure what it's actually useful for.All in all impressed with this. A lot of performance squeezed in. I'm looking forward to adding a second ssd at some point and upgrading the ram. But the Only thing is Battery backup is slightly low and inadequate .READ MOREFlipkart CustomerCertified Buyer, AnakapalleOct, 20205Super!Excellent design with Powerful & Efficient.Sound loudness was not upto the mark but supports dolby.Overall very good device!READ MOREAbhilash PCertified Buyer, AdoorOct, 20205Good value for money!! (review after 2.5 months usage)! had bought it during the big billion-day sale for just 93k. RTX laptop for less than 1 lakh rupees is definitely a steal of a deal. Truly, a beast of a PC for gaming. The thermals are pretty good. Download and use the "throttleslop" software to resolve heating issues if any (check some youtube tutorials on how to use "throttleslop"). Battery life is poor, but you obviously don't expect gaming laptops to have good battery life. Excellent at handling other creative multimedia software as well...READ MORESrikara ShankaraCertified Buyer, BangaloreJan, 20215Brilliant!Absolute beast got for 99980 at BBD. Only lap with rtx 2060 below 1 lakh other than asus tuf a15 which has very poor display(but high processor).I7 is more than enough for day to day work. Booting speed almost 7 or 8 seconds. Only disappointment is battery... Almost 3 or 4 hrs viewing time.But other than that everything is perfectly fine... Gets little hot at athe keyboard and at the input air vents even when the turbo mode is kept on but thats normal.. Main competitors at this specs and pri...READ MORERahul Anil kumarCertified Buyer, ErnakulamNov, 20205Great product!This laptop is great at this price point..... I'm also facing screen bleeding issues but it's not that irritating...After 5 months of Usage : Everything is fine but my laptop gets too hot while gaming with plugged in (around 92° CPU & 75° GPU). But the performance are really good FPS on Forza Horizon 4 at ULTRA settings consistently around 100. But without charging if I played that game obviously Frame Rates are lower around 30 but the laptop stays cool. I'm really worried about the temp...READ MORESheran AslamCertified Buyer, ChennaiNov, 20205Great product! am breaking down the review on the basis of my experience and opinion of this Machine.1) Excellent GPU and CPU performance (6 cores are more than sufficient for gaming, feel free to go for RYZEN based laptop if you are into video editing, animation and all). Will run most of the AAA titles on high-ultra setting at 60+ fps. And if you play e-sports titles like Dota, CSGO, etc. then easily you'll get 140+ fps and you'll be able to take advantage of 144hz pannel.2) Thermals are very good ...READ MORESamarth RanaCertified Buyer, DehradunJan, 20215Perfect product!Excellent graphics and performance. Can improve battery though!READ MORETanishq VarsheyCertified Buyer, ChandausNov, 20205Excellent!Coming from a technical and IT background, using a lot of techs, I'll say it's a great combination of everything for heavy workloads including a lot of features in it. the cooling system is damn great which is one of the most imp in Laptop durability. Rest of the features are really need not to be told differently.Overall it's a BEAST and go for it.READ MOREDebdutta GhoshCertified Buyer, MedinipurOct, 20204Nice product!Predator is awesome series but still improvement should be done with their battery backups and Backlight bleeding issue! have little bleeding but it is negligible But all over I7 10750h with rtx 2060 144 Hz and a coolest system at 99,990 will get what u need else!READ MOREFlipkart CustomerCertified Buyer, DamanOct, 20205Brilliant!The laptop is just amazing! Will be updating with pros and cons after few days of using it.READ MOREArjun TambieCertified Buyer, BengaluruOct, 2020+All 316 reviewsQuestions and AnswersQ:Is the 16gb ram single channel or dual channel?A:Its dual channel, but the maximum capacity is only 16 gb it is not upgradable to 32 gb. You can search the product code in acer/google to find more informationShijith k kCertified BuyerRead other answersQ:If i open back panel to upgrade ram or ssd will it affect the warranty ?A:It will void your warranty since there is a sticker on top of one screw which will get damaged if you want to open the back panel.Read other answersQ:Is the display TFT or IPS cause flipkart lists it as TFT but Acer site lists it as IPSA:It must be a mistake,display is Ips and has good response.Tony Manuel Certified BuyerQ:Laptop matel edge give electric shock while charging. Can you tell me this is normal or laptop is defective?A:It's happen with no earthing, try to connect to main electric switchboard and inbuilt laptop has no extra protection for this issue.Q:Didint work the volume switch in keyboard,why?A:it would work frn + up & down arrow keyShariq AnsariCertified BuyerRead other answersQ:Can it run VR games?A:Yes!Q:Can we upgrade SSD and HDD to 2TB or it is limited to 1TB?A:yes it's upgradableAnand KCertified BuyerQ:does it have extra slot for upgrading ram?A:Well...there are two slots...which are using 8GB ram each when you buy...but it supports ram upto 32GB...which means you can replace those with 16GB studs each...Sashi HarranCertified BuyerQ:How good is this, over-all experience?A: know this laptop is very good in terms of performance, look everything, Minor screen bleeding at bottom side of laptop. But i have an problem with 3.5mm microphone jack and sometimes its not works.Ajay KumarCertified BuyerQ:Is this laptop is good for architecture students 3rd year?A:Yes
